

# DIGITAL GAME DESIGN

## Event Description Heading

The Digital Game Design and Development program offers a project-based curriculum that allows you to develop the skills needed to create video games in a professional environment including game design, computer programming, and visual design. The program focuses heavily on game creation. You will work on several solo and group projects, giving you a chance to develop a broad range of game-creation skills. In class, you will complete a capstone thesis project that can be used as a portfolio piece on a job application or as an independent commercial project.

**Make 2D and 3D Games**
