

BOUNDARY PLANNING DATA

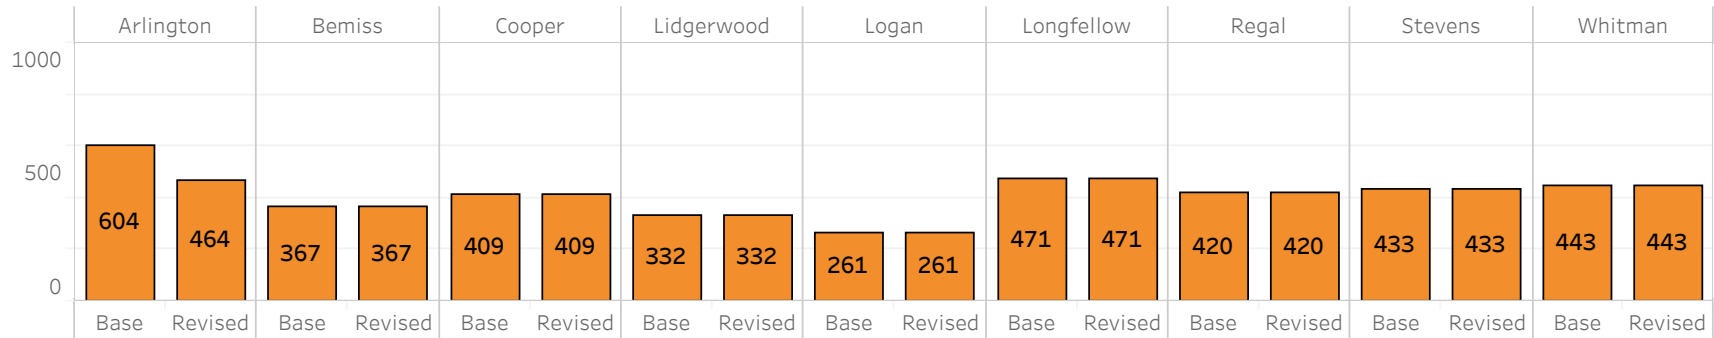

This document includes the data points used by the Boundary Adjustment Committee to estimate potential impacts of different boundary options.

NOTES ABOUT THE DATA:

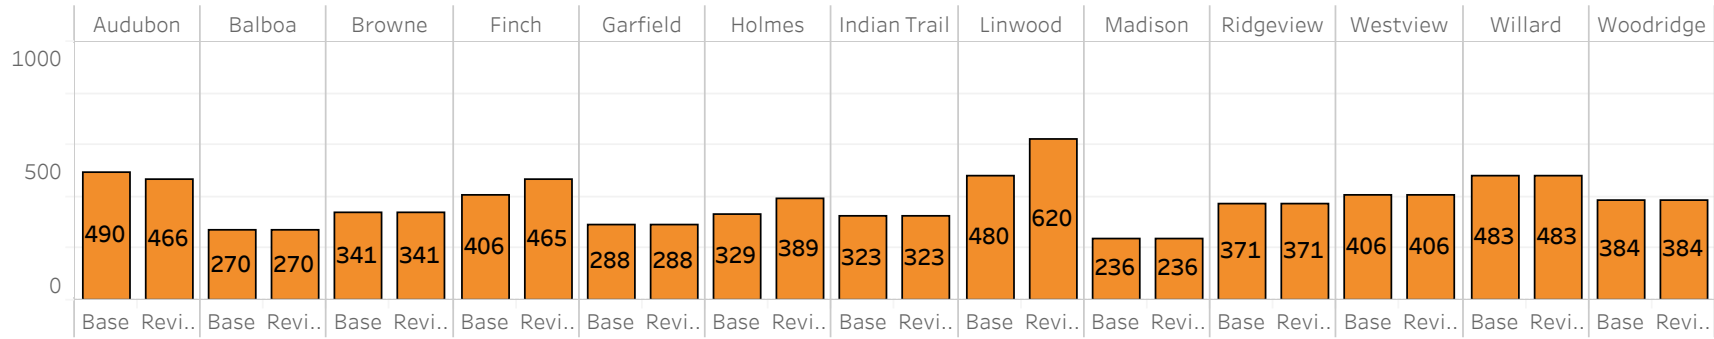

- All data is presented in K-5, 6-8, 9-12 format representing the approved grade configuration changes.
- The data represents the students living in the assignment zone, NOT the actual students attending the school.
- Choice students are not factored into enrollment when determining over- or under-subscription of schools in this data.
- As students Choice In or Choice Out of schools or attend Options schools or other district Programs this planning data will deviate from the actual school data.
- The committee is using this planning data because it provides a static set of data for comparison with boundary revisions as they occur.
- This data represents pre-COVID school closures more closely emulating total student numbers that are anticipated outside of this current school year.
- Comparisons of BASE and REVISED data within this document will give indications of potential, but not actual, increases or decreases relative to boundary adjustment options.
- Comparisons of this data to actual school data should not be made, as they are not the same data sets.
